

Business with Values

Request for Proposal - Implementation of AI-Enabled Barcode Reading, OCR & Aggregation Solution Across MPC Warehouses

Version 1.0 | July 2026

DISCLAIMER:

The information contained in this Request for Proposal (RFP) document or information provided subsequently to partner(s) or applicants whether verbally or in documentary form by or on behalf of Albatha Group, is provided to the partner(s) on the terms and conditions set out in this RFP document and all other terms and conditions subject to which such information is provided. This RFP is neither an agreement nor an offer and is only an invitation by Albatha Group to the interested parties for submission of bids. The purpose of this RFP is to provide the partner(s) with information to assist the formulation of their proposals. This RFP does not claim to contain all the information each partner(s) may require. Each partner(s) should conduct its own investigations and analysis and should check the accuracy, reliability & completeness of the information in this RFP and where necessary obtain independent advice. Albatha Group makes no representation or warranty and shall incur no liability under any law, statute, rules or regulations as to the accuracy, reliability or completeness of this RFP. Albatha Group may in its absolute discretion, but without being under any obligation to do so, update, amend or supplement the information in this RFP.

1. Company Overview:

Albatha is the Arabic word for 'valley', inspired by the notion of growth and progress. Headquartered in the United Arab Emirates, Albatha was founded in early 1950s by Sheikh Mohammed Sultan Al Qassimi, whose vision and entrepreneurship has resulted in formation of a widely diversified group.

Today, the group is comprised of over 70 autonomous companies - specialising in sectors as diverse as automotive, healthcare, manufacturing, engineering, electronics, FMCG, food, Wholesale Distribution and real estate.

We are proud to be one of the oldest and largest private business holdings in the UAE, with continued commitment to extend our reach further into the region. Our momentum comes from a founding ambition to improve the quality of life of our people, customers and society. Across the Group, we challenge ourselves daily to create new opportunities, look beyond conventional boundaries and embrace progress through innovation. These principles are reflected in partnerships and knowledge-sharing with global leaders in multiple market segments. For over 75 years Albatha has championed good business practices and is trusted to represent the world's top brands. Like all successful businesses, Albatha is constantly evolving, and we look forward to an even more dynamic future – leading by example and adding further value to life, work and our communities.

2. Project Background & Objective:

Modern Pharmaceuticals Company (MPC), a member of Albatha Group ("Client"), intends to engage a qualified and experienced implementation partner to implement an intelligent Barcode Reading and Aggregation Solution to support compliance with the UAE Tatmeen Track and Trace System across its warehouse operations.

The objective of this engagement is to implement a centralized solution that automates barcode scanning, product validation, and aggregation to ensure regulatory compliance, end-to-end product traceability, and improved warehouse efficiency. The solution shall also incorporate Artificial Intelligence (AI)-based Optical Character Recognition (OCR) capabilities to automatically identify and extract product information, including SKU/Product Name, Batch/Lot Number, and Expiry Date, from product labels in cases where a barcode is missing, damaged, unreadable, or unavailable. The AI engine shall accurately validate and process the extracted information for downstream warehouse and regulatory processes.

The selected implementation partner shall provide end-to-end services including solution design, implementation, integration, AI model configuration and optimization, testing, deployment, user training, Hypercare, and Annual Application Managed Services (AMS), followed by a phased rollout across MPC's designated warehouse locations (MPC Sharjah, MPC KIZAD, Unicare Al Quoz, and MPC Drug Store Ajman).

Language:

The standard language for the communications related to this RFP shall be in English

3. Confidentiality:

All information described in this RFP and any information disclosed in or in connection with it is strictly confidential and subject to the terms of the signed Confidentiality Agreement between the service provider and Albatha. This includes not only technical information, but also non-technical information such as costs, prices, quantities, etc. The content of this RFP may not be disclosed to third parties without prior written consent and authority of Albatha.

The service provider may not furnish any information, make any statement, or issue any document or other written or printed material concerning the acceptance of any response to this RFP for publication in any of the media without written approval of Albatha. Neither Albatha nor this RFP may be referred to or included in any reference list, customer list, marketing or advertising materials without the prior written approval of Albatha in each case.

In turn, Albatha and its advisors will treat all information received in confidence and will use it solely for the purpose of deciding whether to invite the service provider to engage in evaluation for the provision of IT support services.

Any conflict of interest or potential conflict of interest by the service provider, its employees, or its officers must be fully disclosed to Albatha.

4. RFP Process:

Key RFP activities for this process are set out below. However, Albatha reserves the right to make any necessary amendments

RFP Issuance: 28th July 2026

Submission of Queries: 30th July 2026

Response to Queries: 31st July 2026

Submission of Technical & Commercial Proposal: 3rd August 2026

Tentative Project Award Date: 31st August 2026

While Albatha welcomes procedural questions about this RFP, service providers must refrain from making inquiries about the ongoing evaluation process.

Please note that Albatha team may ask the shortlisted partners to present their proposal to Albatha management as outlined above.

4.1 Instruction to Partner's:

The proposal should be prepared in line with the instructions given in the RFP document. All the requirements as per the RFP must be met under all circumstances.

The bids and communications should be addressed only to:

Vineeth Nair - IT Procurement Manager – vineeth@albatha.com

4.2 Information on bidding process

Albatha is not bound to accept any proposal and has the right, as it might determine in its sole and absolute discretion, for any reason, at any time, and during each stage of the tender process to:

- a. reject any or all the proposals
- b. accept any proposal, in whole or part
- c. discuss with any respondent different or additional terms to those envisaged in the RFP or in said respondent's proposal
- d. accept or reject even if only one proposal is received
- e. decide not to proceed at all with the negotiation or enter a contract with any respondent in respect of all or any of the IT service support
- f. alter the timetable, the bidding process or any or all the procedures or objectives of the RFP or any other aspect of this RFP, including stopping the bidding process entirely and
- g. advertise or call for new or additional proposals.

Without in any way limiting the foregoing, Albatha reserves the right to determine, in its sole and absolute discretion, to make the determination on a basis other than that set out in this RFP, which proposal, if any, most closely meets its goals and objectives for the delivery of the service support, including the right not to accept the proposal with lowest costs.

4.3 Cost to prepare response

All cost and expenses incurred by a service provider relating to the preparation or presentation of a proposal or in any way related to this RFP or tender process shall be borne by the respondent. Albatha is not liable for any costs, expenses, losses or damages occurred or suffered by any respondent, or any person connected to

any respondent, or to reimburse or to compensate any respondent therefore under any circumstances, including as a result of any action, amendment, modification or withdrawal contemplated in section 6.4. Without limitation, Albatha shall not be responsible for any delays or costs associated with or related to any reviews or approvals, or the process, which may be required by any regulatory authority.

4.4 Provider's proposal presentation and evaluation

During the tender process, the service provider is asked to give a remote presentation including a Q&A session. The service provider shall present its response in one session. Albatha reserves the right to down-select service providers based on the proposal submitted and only invite a sub-set of service providers.

5. Scope of Implementation:

The selected implementation partner shall provide end-to-end professional services for the design, implementation, configuration, integration, testing, deployment, and support of the Barcode Reading and Aggregation Solution across MPC's warehouse operations to ensure compliance with the UAE Tatmeen Track and Trace System. The solution shall also incorporate Artificial Intelligence (AI)-powered Optical Character Recognition (OCR) capabilities to identify and extract product information from product labels where barcodes are unavailable, damaged, or unreadable.

The scope of work shall include, but not be limited to, the following:

5.1 Solution Design & Architecture

- Conduct requirement gathering and solution design workshops with business and IT stakeholders.
- Analyze business processes, barcode workflows, AI-based label recognition requirements, integration requirements, and scalability needs.
- Prepare functional and technical design documents covering solution components, AI/OCR capabilities, workflows, integrations, security, and infrastructure requirements.
- Design a secure, scalable, and high-performance solution architecture aligned with Albatha's IT standards.
- Design the AI/OCR architecture for extracting SKU/Product Name, Batch/Lot Number, Expiry Date, and other relevant product attributes from printed labels where barcode data is unavailable.
- Define Cloud hosting architecture, data flow, system interfaces, AI processing workflow, and deployment approach.
- Obtain Albatha's review and approval of the finalized solution design before implementation.

5.2 Application Development & Configuration

- Configure and customize the Barcode Reading and Aggregation Solution to meet MPC's business, operational, and regulatory requirements.
- Configure barcode decoding, OCR, AI-based label recognition, product verification, quantity validation, serial number, batch/lot number, expiry date, and aggregation functionalities.
- Configure AI models to accurately extract SKU/Product Name, Batch/Lot Number, Expiry Date, and other product information from printed labels when barcodes are missing, damaged, or unreadable.
- Develop and configure required business rules, workflows, validation logic, confidence thresholds, manual verification workflows, and exception handling processes.
- Configure user roles, access controls, system parameters, and reporting requirements as per business needs.

- Perform unit testing and configuration validation to ensure the solution meets defined requirements before deployment.

5.3 Functional requirements

- Capture and decode GTIN, Serial Number, Batch/Lot Number, and Expiry Date from 2D barcodes.
- Utilize AI-powered OCR to automatically identify and extract SKU/Product Name, Batch/Lot Number, Expiry Date, and other relevant product information from product labels when barcode information is unavailable, damaged, or unreadable.
- Automatically validate AI-extracted data against SAP ERP master data and the UAE Tatmeen Track and Trace System.
- Validate product information against the UAE Tatmeen Track and Trace System.
- Perform barcode validation for pharmaceutical, consumer healthcare, and medical equipment products.
- Verify products against warehouse transactions, including quantity, batch, expiry, and serial number validation.
- Support configurable confidence thresholds for AI recognition with manual verification and correction workflows where confidence levels fall below predefined limits.
- Support product aggregation and disaggregation, including parent-child relationships and bundle management.
- Enable real-time barcode reading, AI-assisted product recognition, validation, and exception handling with configurable business rules.
- Integrate with MPC's ERP and other business applications for seamless data exchange.
- Provide dashboards, reporting, audit trails, and AI recognition logs for operational monitoring and regulatory compliance.
- Support future scalability to accommodate additional warehouses, products, label formats, and regulatory requirements.

5.4 Integration Requirements

- Integration with MPC's SAP Outbound Invoice Object.
- Integration with the UAE Tatmeen Track & Trace System for serialization verification and regulatory reporting.
- Enable validation of AI-extracted product information against Tatmeen records.
- Support REST APIs, Web Services, or other industry-standard integration mechanisms.
- Support configurable interfaces for future third-party applications.
- Integration with existing Oridx application to fetch the required packing data from Tatmeen at backend. The Oridx is a third-party B2B application integrated with Tatmeen

5.5 Testing & Validation

- Perform unit testing, system integration testing (SIT), user acceptance testing (UAT), and performance testing.
- Prepare detailed Test Strategy, Test Cases, and Test Scripts.
- Validate AI/OCR recognition accuracy across different product packaging, label formats, fonts, lighting conditions, and image quality scenarios.
- Perform Integration Testing with SAP ERP and Tatmeen.
- Conduct Security Testing and Vulnerability Testing.
- Execute Performance and Load Testing.
- Support User Acceptance Testing (UAT) and resolve defects before Go-Live.
- Provide Test Summary Report and obtain formal Client sign-off before production deployment.

5.6 Deployment & Rollout

- Deploy the solution at the MPC Sharjah Warehouse.
- Deploy and validate AI/OCR functionality for live warehouse operations.
- Roll out the solution to the designated warehouse locations following successful implementation and acceptance.
- Prepare a detailed Cutover Plan.
- Prepare rollback and contingency procedures.
- Execute production migration and data validation.
- Verify successful integration with all external systems after Go-Live.
- Obtain formal Production Acceptance from the Client.

5.7 Training & Knowledge Transfer

- Provide administrator and end-user training.
- Train warehouse users on barcode scanning, AI-assisted label recognition, exception handling, and manual verification procedures.
- Deliver operational and technical documentation.
- Conduct knowledge transfer sessions for the Client's IT team covering AI model administration, configuration, monitoring, and maintenance.

5.8 Go-Live & Hypercare

- Support production deployment and Go-Live activities.
- Monitor AI recognition accuracy and fine-tune AI/OCR models during the Hypercare period to improve extraction performance.
- Provide Hypercare support to stabilize the solution following implementation.
- Immediate resolution of production issues.
- Daily/weekly status reports.
- Formal transition to AMS after successful Hypercare completion.

5.9 Security & Compliance

The Service Provider shall ensure that the Barcode Reading and Aggregation Solution complies with Albatha Group's security policies and industry best practices. The minimum-security requirements shall include:

- The service provider shall clearly specify the proposed hosting model, including cloud provider, hosting location, infrastructure sizing, availability architecture, backup strategy, disaster recovery approach, and associated recurring costs.
- All application data, databases, backups, and related information shall comply with UAE Data Residency requirements.
- All data transmission between users, devices, applications, APIs, and systems shall be secured using TLS 1.2 or higher encryption.
- All sensitive data stored within the Solution shall be encrypted using AES-256 encryption or equivalent industry-standard encryption.
- The Solution shall support Multi-Factor Authentication (MFA) for administrative and privileged user access.
- The Service Provider shall implement Privileged Access Management (PAM) controls for managing and monitoring elevated access.
- The Solution shall support integration with Albatha's SIEM platform for security monitoring, logging, and alert management.
- The Service Provider shall implement Role-Based Access Control (RBAC) to ensure appropriate user access permissions.

- The Service Provider shall conduct Vulnerability Assessment and Penetration Testing (VAPT) before production deployment.
- The Service Provider shall perform Quarterly Vulnerability Assessments and remediate identified security vulnerabilities.
- The Solution shall follow secure software development practices and maintain a secure source code repository with controlled access.
- The Service Provider shall maintain valid ISO 27001 certification or equivalent information security assurance standards.
- The Service Provider shall implement security incident management procedures and notify Albatha of any security incidents or data breaches.
- The Service Provider shall provide security audit reports, compliance certificates, and assessment results upon request.
- The Service Provider shall ensure security controls are maintained throughout implementation, support, maintenance, and enhancement activities.

5.10 Application Managed Services (AMS)

The implementation partner shall provide comprehensive Application Managed Services (AMS) following the successful Go-Live of the solution.

The AMS scope shall include, but not be limited to, the following:

- Incident Management, including issue logging, troubleshooting, resolution, and Root Cause Analysis (RCA) for critical incidents.
- Service Request Management for user requests, configuration changes, operational support, and AI/OCR configuration requests.
- Continuous application performance monitoring, health checks, preventive maintenance, and proactive system optimization.
- Continuous monitoring and optimization of the AI-powered OCR engine, including recognition accuracy, processing performance, confidence score analysis, and model tuning to improve extraction of SKU/Product Name, Batch/Lot Number, Expiry Date, and other product information.
- Deployment of software patches, AI model updates, bug fixes, security updates, and application enhancements.
- Maintenance and optimization of AI recognition rules, label templates, and extraction logic to support new product packaging, label formats, and regulatory changes.
- Monitoring, troubleshooting, and support for barcode scanning, AI-assisted label recognition, product validation, aggregation, and exception handling processes.
- Enhancements, configuration changes, AI model refinements, and user interface (UI) improvements to support evolving business and regulatory requirements.
- Monitoring and support for SAP ERP and UAE Tatmeen Track & Trace System integrations to ensure uninterrupted and accurate data exchange.
- Monitoring AI recognition failures, low-confidence results, and exception queues, including recommendations for corrective actions and continuous improvement.
- Periodic service review and governance meetings to review service performance, AI recognition accuracy, operational risks, recurring issues, and continual improvement initiatives.
- SLA monitoring and reporting, including incident statistics, response and resolution times, system availability, AI/OCR recognition accuracy, processing success rates, exception trends, and overall service performance metrics.

- Maintenance of application, integration, AI model configuration, and operational documentation, including knowledge transfer to the Client's IT team as required.
- Provide support based on agreed Service Level Agreements (SLAs), including priority classification, response time, resolution timelines, and defined service commitments for AI-assisted recognition services.

5.11 Hardware Procurement, Installation & Commissioning

- The implementation partner shall coordinate the procurement, installation, testing, commissioning, and integration of all required hardware components, including barcode scanners, industrial cameras, AI-enabled imaging devices, mobile terminals, printers, and supporting infrastructure.
- Ensure all hardware components are fully compatible with the proposed Barcode Reading and Aggregation Solution, including AI-powered OCR and image recognition capabilities, and are configured for optimal performance.
- Supply and configure high-resolution imaging devices and appropriate lighting (where required) to enable accurate AI-based extraction of SKU/Product Name, Batch/Lot Number, Expiry Date, and other product information from labels when barcodes are missing, damaged, or unreadable.
- Configure AI processing devices and optimize image capture settings to maximize recognition accuracy and processing performance.
- Perform end-to-end hardware validation, AI image capture validation, and integration testing prior to production deployment.
- Configure and validate barcode scanners, AI imaging devices, mobile devices, printers, and peripheral equipment to ensure seamless interoperability.
- Coordinate hardware warranty registration and vendor support.
- Configure device management software for centralized monitoring, firmware updates, health monitoring, and remote administration of all hardware devices.
- Perform wireless connectivity, network performance, and device communication testing to ensure reliable real-time barcode scanning, AI image processing, and data synchronization.
- Validate the end-to-end workflow for both barcode-based scanning and AI-assisted label recognition to ensure seamless operation across all supported warehouse scenarios.

6. Key Expected Outcomes / Deliverables:

The implementation partner shall provide, at minimum, the following deliverables:

- Project Plan & Implementation Methodology
- Project Governance & Communication Plan
- Business Requirements & Fit-Gap Analysis Report
- Solution Architecture & Technical Design Documents
- AI Solution Architecture, AI/OCR Model Design, and Image Processing Workflow Documentation
- Functional Design & Configuration Documents
- Hardware Deployment, Installation & Commissioning Documentation
- Barcode Reading, AI-Powered OCR & Aggregation Configuration Documents
- AI Model Configuration, Training, Validation, and Performance Documentation, including recognition rules, confidence thresholds, and exception handling workflows
- Tatmeen Integration Design & Interface Documents
- ERP Integration Design & Technical Documentation
- System Configuration & Deployment Documentation
- Security, Infrastructure & Compliance Documentation, including AI security, data privacy, and image/data retention controls

- Test Strategy, Test Scripts & Test Results (Unit Testing, SIT, UAT, Performance Testing, AI/OCR Accuracy Testing, and Integration Testing)
- AI Recognition Accuracy Report covering SKU/Product Name, Batch/Lot Number, Expiry Date extraction, confidence scores, and validation results across supported product types and label formats
- User Training Materials & Administration Guides, including AI-assisted scanning, manual verification procedures, and exception management
- Cutover, Go-Live & Deployment Plan
- Hypercare Support Plan, AI Model Optimization Report, and Transition to Application Managed Services (AMS)
- Operational Runbook, Support Documentation & Knowledge Transfer, including AI model administration, monitoring, maintenance, and troubleshooting procedures
- Risk, Issue & Dependency Register
- Final Project Closure Report, including implementation summary, AI performance outcomes, lessons learned, and recommendations for continuous improvement.

7. Project Documentation Requirements:

Albatha requires comprehensive & timely documentation be developed & maintained throughout the project lifecycle. All documentation must adhere to Albatha's expected quality standards and be submitted for review and approval at designated project milestones.

Minimum Required Documentation Includes:

- Project Charter, Project Management Plan, Business Requirements Specification (BRS), and Fit-Gap Analysis Report.
- Functional Design Document (FDD), Technical Design Document (TDD), Solution Architecture Document, and AI Solution Architecture & OCR Design Documentation.
- Hardware Installation & Configuration Guide, Application Configuration Documentation, and Barcode Reading, AI-OCR & Aggregation Configuration Documentation.
- SAP ERP and UAE Tatmeen Integration Design & Technical Documentation.
- AI Model Configuration, Validation, Accuracy Testing, Optimization, and Performance Documentation, including confidence thresholds and exception handling.
- Test Strategy, Test Cases, Test Execution Reports (SIT, UAT, Performance Testing), AI/OCR Accuracy Reports, and UAT Sign-off.
- Security Configuration, Compliance Documentation, Backup, Recovery & Rollback Procedures, and Standard Operating Procedures (SOPs).
- Installation, Deployment, Cutover, Go-Live, Hypercare, Operations & Maintenance Documentation, including AI model administration and monitoring.
- Administrator Guide, End-User Manual, Training Materials, Knowledge Transfer Documentation, and Root Cause Analysis (RCA) Reports for critical incidents.
- Final Project Closure Report, including implementation summary, AI performance outcomes, lessons learned, and recommendations for future enhancements.

Note: All documentation will be considered Albatha's property and must be provided in agreed formats. The partner is expected to maintain version control and ensure timely submission throughout the project phases.

8. Project Team:

Evaluation of key resources proposed by Partner will be carried out by Albatha – IT Team. Albatha expects the team members named in the proposal to be available during the entire duration of the project including hyper care.

Albatha will not consider any substitution during the entire duration of the project except for critical health reasons of key team members proven with supporting documents.

9. Subcontracting:

The Partner should not subcontract any work which forms part of this project, without prior written consent from Albatha.

10. Right to Alter Quantities and requirements:

At any time prior to the deadline of submission of bid, Albatha may, for any reason, whether at its own initiative or in response to a clarification requested by partners, modify the RFP by suitably documented amendment, which will be re-circulated to the potential identified partners.

11. Rejection of a bid:

Albatha may, at its absolute discretion, exclude or reject any proposal that in the reasonable opinion of Albatha contains any false or misleading claims or statements. Albatha owes no liability to any person for excluding or rejecting any such proposal.

12. RFP Ownership:

The RFP and all supporting documentation are the property of Albatha and should not be redistributed without prior written consent from Albatha. Failure to comply may result in disqualification.

13. Proposal Ownership:

All proposals and materials submitted in response to this request shall become the sole and absolute property of Albatha and will not be returned. Selection or rejection of a proposal does not affect this right. The proposal and documentation may be retained, returned or destroyed at the discretion of Albatha.

14. Price Freezing:

The price quoted, agreed and finalized shall remain frozen / valid for the entire tenure of this contract.

15. Indemnification:

The Partner shall indemnify, protect, and save Albatha from all claims, losses, costs, damages, expenses, actions, suits, and other proceedings arising directly or indirectly from any act or omission by the Partner, its employees, or agents in performing the services provided by the contract, including the infringement of patents, trademarks, copyrights, or other statutory rights related to all components used to meet the scope of this project.

16. Award of contract:

The Contract will be awarded after discussions with the successful partner. Upon completion of the bidding process, Albatha will promptly inform the other partners about rejection of their proposals. The selected partner is expected to commence the assignment on mutually agreed date.

17. Order Cancellation:

Albatha reserves its right to cancel the order in the event of delay and forfeit the Bank Guarantee, for the amounts paid from time to time, as liquidated damages against the milestones mutually agreed and indicated in the contract.

18. Partner Information & Questions:

18.1 General Company Overview:

In 300 words or less, please provide the following:

- Introduce your organization and explain why your company is best suited to deliver the implementation of the Barcode Reading & Aggregation Solution for Modern Pharmaceuticals Company (MPC), including your capabilities in delivering AI-enabled automation, OCR, and intelligent data capture solutions.
- Provide details of your experience in delivering similar barcode reading, AI-powered OCR, serialization, aggregation, computer vision, and warehouse automation solutions, particularly within the pharmaceutical, healthcare, or logistics sectors.
- Outline your company's core competencies, including:
 - Barcode scanning, AI-powered OCR, and intelligent image recognition technologies.
 - AI-based extraction and validation of product information such as SKU/Product Name, Batch/Lot Number, and Expiry Date from product labels.
 - Tatmeen Track and Trace System integration.
 - ERP integration capabilities (e.g., SAP or equivalent).
 - Tatmeen Track and Trace System integration
 - AI model configuration, optimization, solution implementation, application development, and managed support services.
- Describe the proposed project team, including:
 - Key roles (e.g., Project Manager, Solution Architect, AI/OCR Specialist, Technical Lead, Integration Lead, Application Developer, QA/Test Lead).
 - Relevant experience, certifications, and technical expertise in barcode solutions, AI/OCR technologies, serialization, aggregation, ERP integration, and warehouse automation.
 - Expected involvement throughout the implementation, AI model configuration, deployment, Hypercare, and Application Managed Services (AMS) phases.
- Provide credentials and references for similar projects executed by the proposed team, including project scope, AI and barcode technologies implemented, integration platforms, client industry, project outcomes, and measurable benefits achieved.

18.2 Work Methodology:

Please provide your response to each of the following in no more than three sentences per question:

- Provide the physical location of your delivery team, including onsite, offshore, or hybrid delivery models, and your recommended onsite presence during implementation, Hypercare, and AMS support.
- Describe your project governance and communication model, including the frequency of project status meetings, progress reporting, risk management, and stakeholder engagement.
- Indicate the number of active clients currently being supported for similar Barcode Reading, OCR, Serialization, Aggregation, or Tatmeen integration solutions.
- Based on your experience, outline the key activities MPC should undertake prior to implementation to ensure a successful deployment of the Barcode Reading & Aggregation Solution.
- Define the key success metrics (KPIs) you propose for measuring the success of the implementation, including solution performance, Tatmeen compliance, barcode reading accuracy, system availability, and user adoption.

19. Proposal & Submission:

19.1 Submission Format:

Proposal packages must be submitted digitally as PDF files. This includes all documents defined below as well as any supplemental information included in your submission. Fully completed proposals must be delivered to the RFP contact at the top of this document by the dates set out above.

19.2 Response:

Responses must be clear and thorough, but concise, and written in plain, easy-to-understand language. Responses must follow the format defined in this RFP.

19.3 Proposal Presentation:

The central element of your RFP response should be a standalone document. In this document applicants should outline all important elements of their offerings, including:

- Company Profile
 - Company overview
 - Employee strength and capabilities (overall and on bench)
 - Experience in deployment of the Barcode Reading & Aggregation Solution.
- Implementation Approach
 - Detailed understanding of Albatha's requirements and scope
 - Approach for
 - Solution Design & Configuration
 - Hardware Installation & Commissioning
 - Testing & Quality Assurance
 - Cutover Planning, Go-Live & Deployment
 - Hypercare Support & Transition to Application Managed Services
- Project Management & Governance
 - Project management methodology
 - Roles and responsibilities (including RACI matrix)
 - Risk management and mitigation approach
 - Change management framework
 - Communication model
 - Governance and escalation structure
- Scope Definition
 - In-Scope activities
 - Out of Scope activities
 - Assumptions
 - Dependencies
 - Prerequisites
- Commercial Proposal
 - Implementation Cost
 - Total cost
 - Resource wise estimation (man-days)
 - Resource mix (Onsite/offshore)
 - Resource rate card by role & experience
 - Blended rate card for any future CRs
 - Support & Warranty
 - Hypercare period (Minimum 3 months)
 - Post Implementation warranty period
 - Payment Terms
 - Payment milestones shall be linked to deliverables
 - Lead time of implementation of both phases
 - Penalty clause for delays
 - Post Implementation Services
 - Rate Card for post implementation support (monthly/annually)
 - Blended man-hour or man-day rates
 - Support SLAs

Prices and costs can be specified in USD or AED and must include all local taxes, but responses should also indicate the current local tax rate(s) applicable for each charge.

The provider should clearly identify any known instances where cost or service ambiguity may arise in the proposal response. Additionally, all caveats and assumptions must be comprehensively detailed within the proposal.

19.4 Attachments, Resources, Materials for Review:

In addition to the budget proposal, please provide links, attachments, or other materials relevant for our review of your proposal.

20. Selection and Contract Award:

Proposals will be evaluated based on the requirements set forth in the RFP. Selection of the company(s) will be at the discretion of Albatha and will be based on the proposal(s) that Albatha deems to be the most responsive and effective and best serves the interests of Albatha.

Selected companies may be required to make on-site oral and visual presentations or demonstrations at the request of Albatha. Albatha will schedule the time and location for any presentations. Costs and equipment for such presentations are the responsibility of the proposing company. Best and Final offers may be solicited from the pool of finalists prior to selection of the successful firm.

Proposals will be reviewed by Albatha IT team and will be evaluated based on the following criteria:

1. Experience and Qualifications
 - a. Proven experience in implementing Barcode Reading, AI-powered OCR, Serialization, and Aggregation solutions, preferably within the pharmaceutical, healthcare, or logistics sectors.
 - b. Demonstrated experience in integrating solutions with the UAE Tatmeen Track and Trace System and enterprise ERP platforms (e.g., SAP or equivalent).
 - c. Proven capability to design and implement scalable, secure, and high-performance barcode reading and aggregation solutions.
 - d. Availability of qualified local or regional implementation and support resources.
 - e. Strong client references for similar Barcode Reading, OCR, Serialization, Aggregation, or warehouse automation implementations.
2. Staff Expertise/Implementation and Operational Teams
 - a. Qualifications and experience of the proposed Project Manager
 - b. Expertise of key functional and technical resources, including:
 - i. Project Manager
 - ii. Solution Architect
 - iii. AI/OCR Specialist
 - iv. Technical Consultant
 - v. Integration Consultant (Tatmeen & ERP)
 - vi. Infrastructure & Security Specialist
 - vii. Testing & QA Specialist
 - c. Availability and commitment of dedicated implementation and Hypercare support resources throughout the project lifecycle.
 - d. Relevant certifications and experience of proposed team members
3. Project approach & Methodology:
 - a. Understanding of project scope and objectives
 - b. Strength of implementation methodology
 - c. Feasibility of timeline and resource plan
 - d. Risk management and mitigation approach
 - e. Testing, cutover, and deployment approach
4. Proposal Quality & Clarity:

- a. Overall quality, structure, and professionalism of the proposal
- b. Completeness of response
- c. Clarity of scope, assumptions, dependencies, and deliverables
- d. Transparency in risk identification

5. Financial Proposal

- a. Total cost of implementation
- b. Transparency and completeness of cost breakdown, including:
 - i. Resource effort (man-days)
 - ii. Rate cards
 - iii. Implementation and support costs
- c. Alignment of pricing with scope and deliverables
- d. Value for money and overall commercial competitiveness

***** End of the Document*****
